Jodo Sandbox Evolution V1 - Showcase

Project Vision

The Jodo Sandbox Evolution is a production-grade, self-service developer portal designed to accelerate integration scaling. By providing a high-fidelity, standalone environment, we enable developers to build, test, and iterate on Jodo payments with zero friction and 100% confidence.

Scaling Integration Rationale

- Zero-Friction Credentialing

Providing pre-computed Authorization Headers removes manual encoding friction.

- Schema Fidelity

Official Jodo nested details schema for production-ready testing.

- Realistic Simulation

Two-stage checkout mirroring real-world latency and UI transitions.

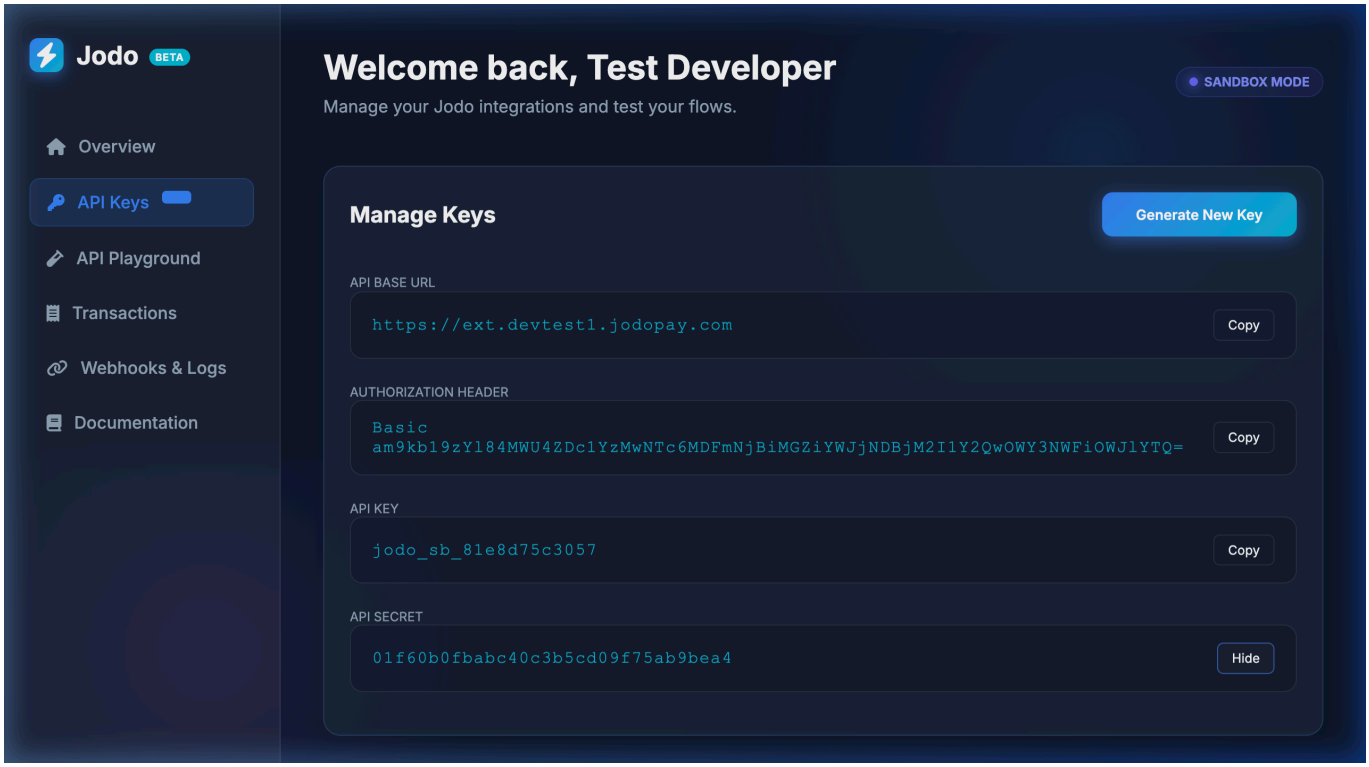
- Real-time Observability

Live metrics dashboard for instant developer sanity checks.

Jodo Sandbox Evolution V1 - Showcase

Step 1: Accessing Secure Credentials

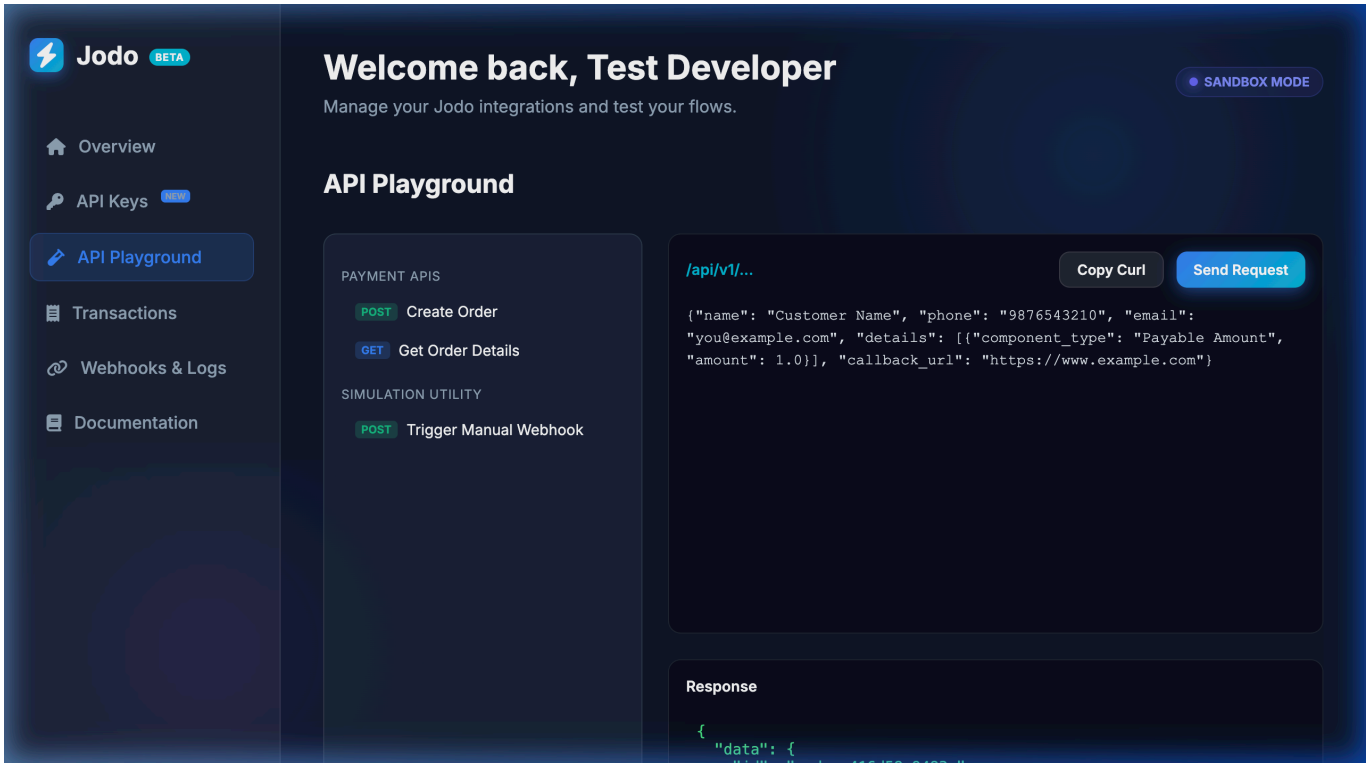
The interface provides a clear Base URL and a revealed Authorization Header for immediate use.



Step 2: Prototyping in the Playground

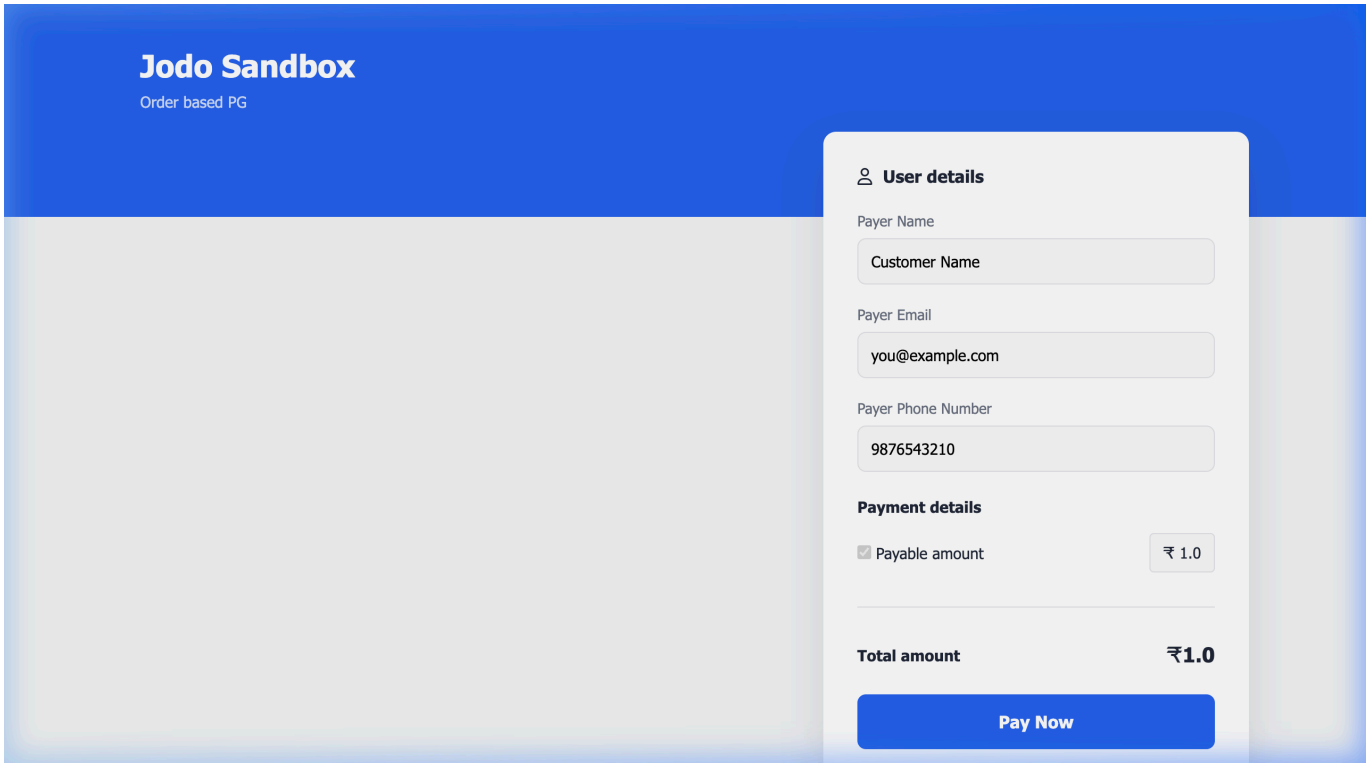
The playground uses the official schema. The 'Copy Curl' utility injects developer credentials automatically.

Jodo Sandbox Evolution V1 - Showcase



Step 3: Realistic Checkout Flow

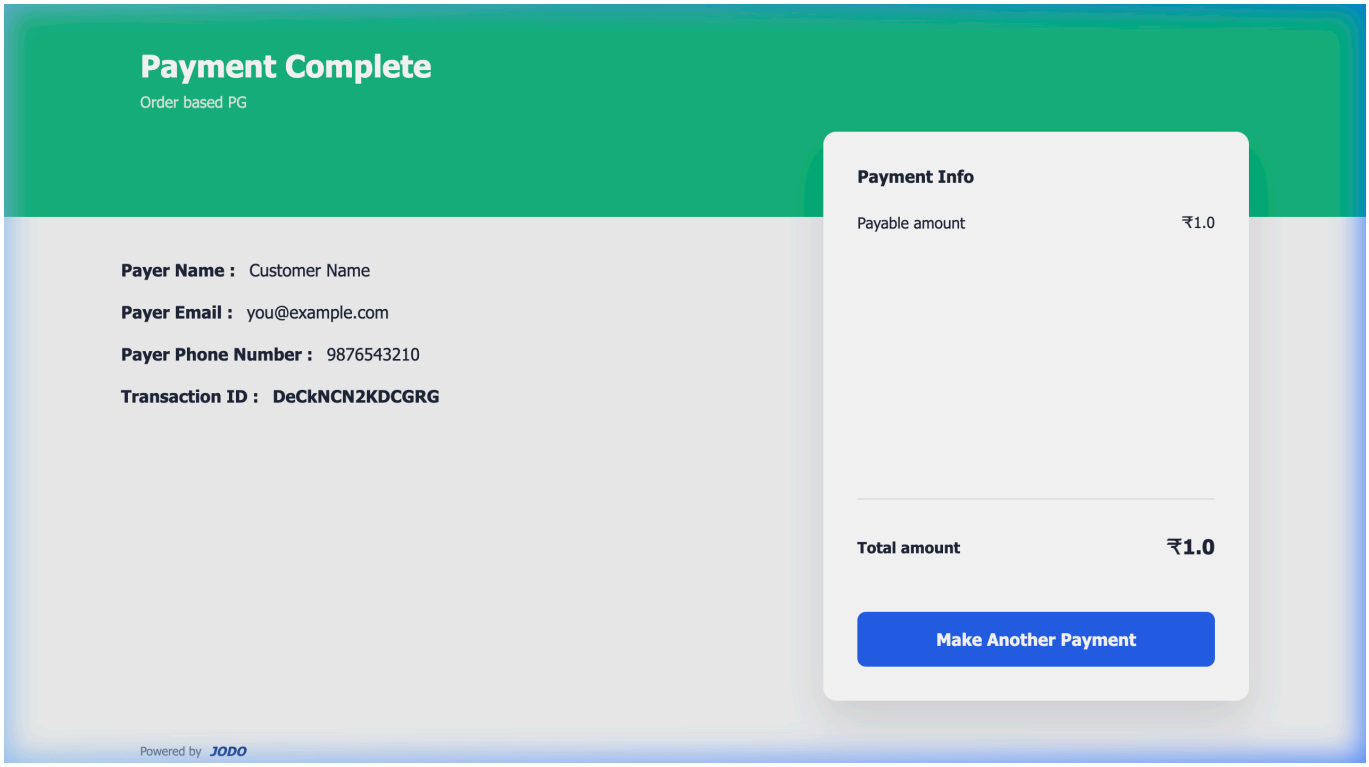
Simulates the Jodo experience with brand-consistent Rupee formatting and correct terminology.



Jodo Sandbox Evolution V1 - Showcase

Step 4: Verification of Success

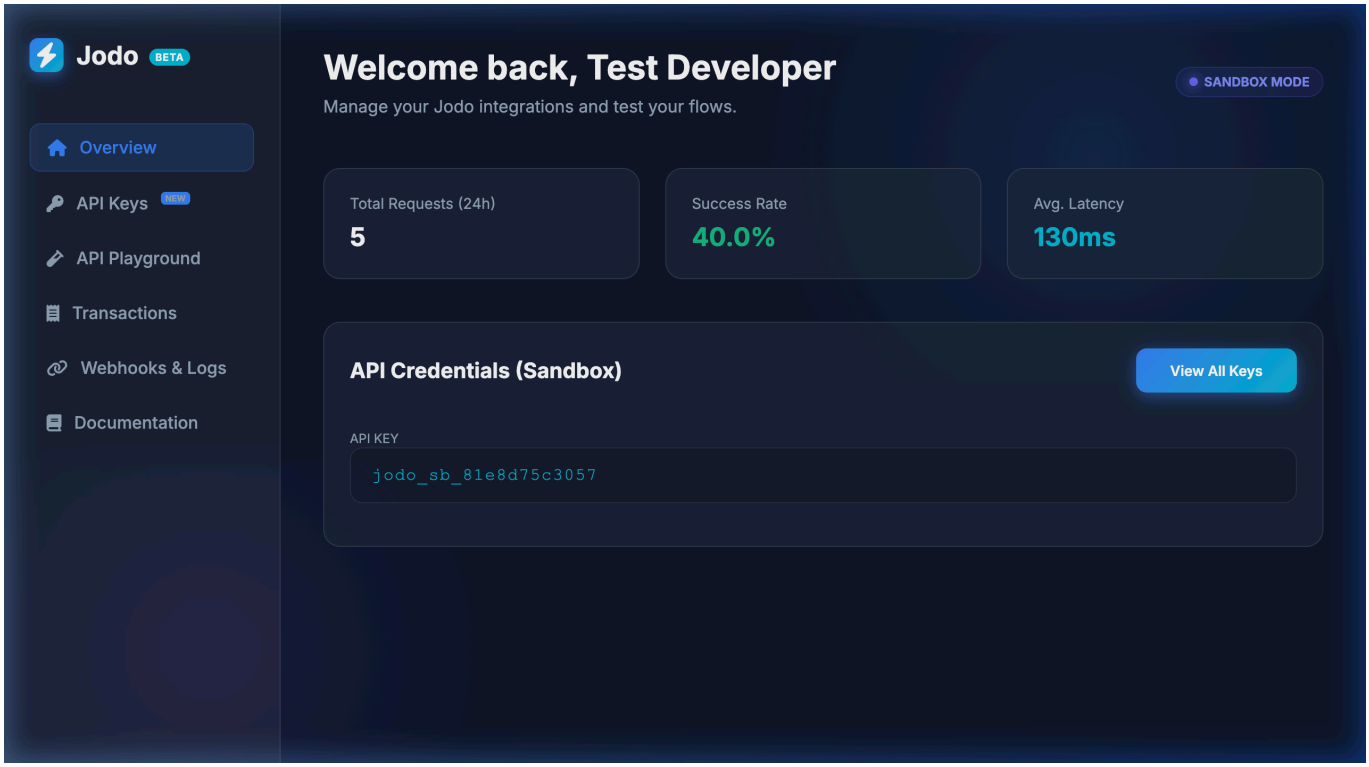
Clean success receipt mirroring production outcomes and status updates.



Dashboard Reflection: Real-time Stats

Live sanity checks for request volume, success rates, and average latency.

Jodo Sandbox Evolution V1 - Showcase



Granular Webhook Observability

Logs detailing delivery status (Debited, Settled, Failed) for backend verification.

V1 Scaling Complete

This standalone sandbox is fully operational and provides a high-performance, self-service path for developer onboarding.
