Jodo Sandbox Evolution V1 - Showcase

Project Vision

The Jodo Sandbox Evolution is a production-grade, self-service developer portal designed to accelerate integration scaling. By providing a high-fidelity, standalone environment, we enable developers to build, test, and iterate on Jodo payments with zero friction and 100% confidence.

Scaling Integration Rationale

- Secure Onboarding

Dedicated login and signup pages for developer-specific access control.

- Zero-Friction Credentialing

Providing pre-computed Authorization Headers removes manual encoding friction.

- Schema Fidelity

Official Jodo nested details schema for production-ready testing.

- Realistic Simulation

Two-stage checkout mirroring real-world latency and UI transitions.

- Real-time Observability

Instant reflection of transactions and webhook delivery logs.

Developer Onboarding: Secure Access

Developers begin their journey by creating a dedicated sandbox account. This ensures that all API keys, webhook configurations, and transaction logs are isolated and secure.

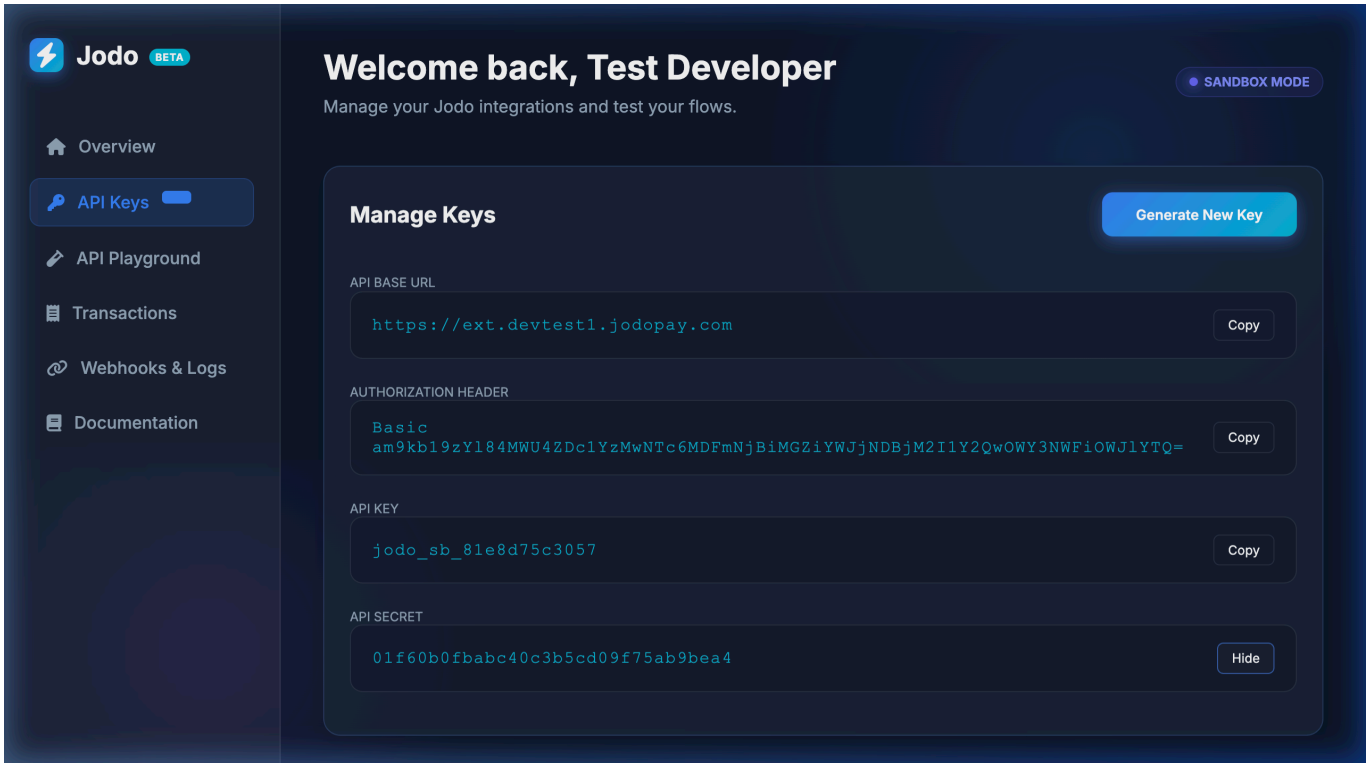
Login Portal

Signup / Instance Initialization

Jodo Sandbox Evolution V1 - Showcase

Step 1: Accessing Secure Credentials

The dashboard provides a clear Base URL and a revealed Authorization Header for immediate integration.



Step 2: Prototyping in the Playground

The playground uses the official Jodo schema. The 'Copy Curl' utility injects headers automatically.

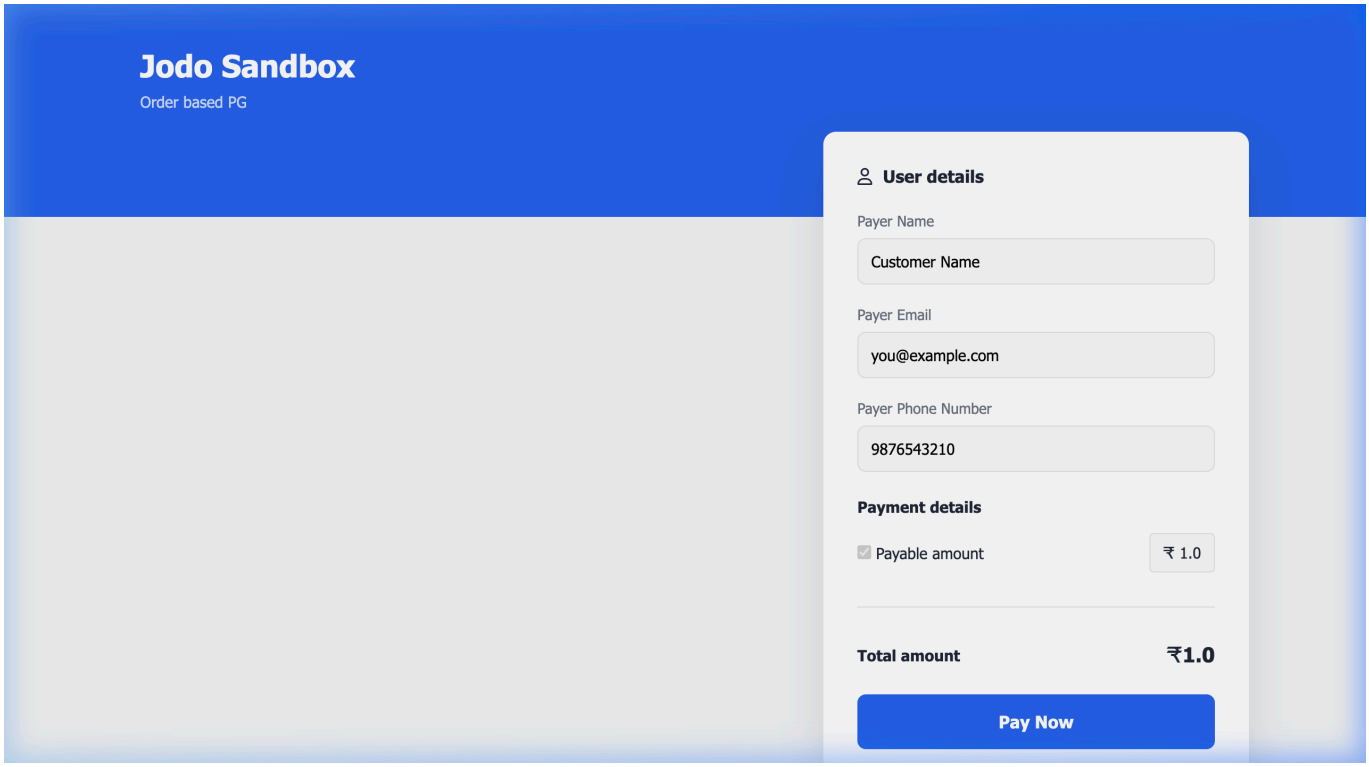
Step 3: Realistic Checkout Flow

Simulates the Jodo client experience with brand-consistent Rupee formatting and correct terminology.



Step 4: Success Verification

A clean outcome page mirroring production success receipts.

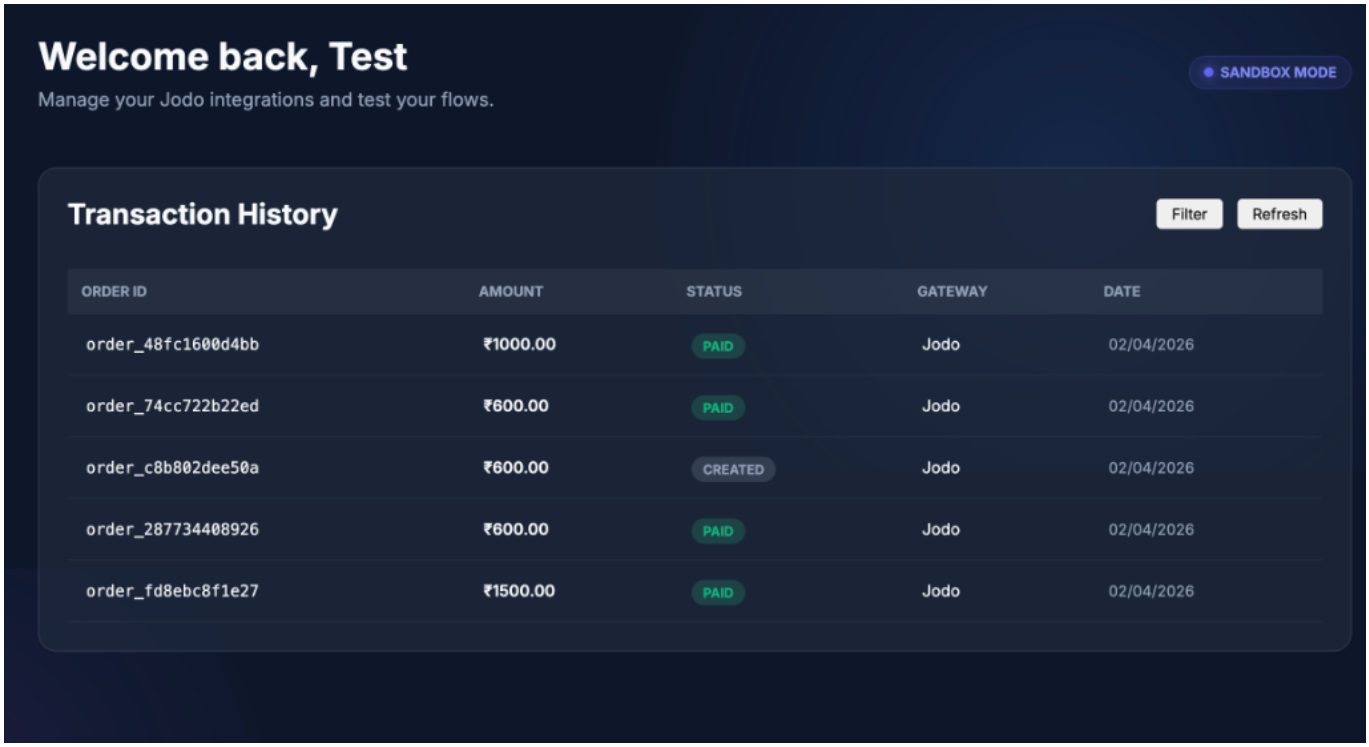
Transaction History & Lifecycle

Every transaction is logged with real-time status updates (CREATED, PAID).



Webhook Delivery Observability

Granular logs detailing delivery status and timestamps for backend verification.
